EDUCATION

Union College

Schenectady, NY

Bachelor of Science in Computer Science

Expected Graduation: June 2027

- **GPA:** 3.75 | Honors: Dean's List
- **Coursework:** Programming with Purpose, Data Structures, Statistics, Web Development, Data Visualization
- **Activities:** International Collegiate Programming Contest (ICPC), Codepath

SKILLS

Languages: Python, JavaScript, TypeScript, Java, HTML, CSS

Technologies: React, Express.js, NodeJS, Tailwind, D3.js, MongoDB, SQL, PostgreSQL, Git, Docker, Flask

Data Science: Pandas, Matplotlib, Numpy, Excel, R, TensorFlow

WORK EXPERIENCE

Undergraduate HCI Researcher

Oct 2024 – Present

Union College

Schenectady, NY

- Partnered with 2 researchers to design calming hand gestures and validated them with 92% accuracy using Google MediaPipe, ensuring reliable input for study participants.
- Programmed a real-time web app with MediaPipe to detect 5 distinct gestures, enabling hands-free interaction in a large-screen Would You Rather game.
- Ran a 50+ participant study, advancing understanding of social interaction with large screens after reviewing 30+ Human-Computer Interaction and UI/UX papers.
- Launched CAP Lab's first website using Next.js, increasing visibility of HCI research to 2,000+ students.

Software Engineering Intern

Feb 2025 – Jun 2025

EpiBuild

Remote

- Developed 3 interactive D3.js visualizations to visualize 20,000+ sales records, giving managers real-time insight into trends and performance.
- Engineered and optimized SQL data processing pipelines to clean and aggregate 20,000+ sales records, reducing analysis time by 20%.
- Managed cloud deployment on Heroku and AWS S3 to process and enable querying of 2GB of historical sales data, ensuring fast retrieval.

PROJECTS

ShopNSplit | *React, JavaScript, Tailwind, Supabase*

- Developed a full-stack app delivering grocery cost breakdowns and payments, reducing manual calculations by 50%.
- Integrated an OCR with Google Gemini API to validate and correct receipt text, achieving 95% extraction accuracy.
- Engineered a Supabase backend for authentication and shared receipt data, streamlining expense tracking.

Viva (NexHacks Project) | *FastAPI, React, TypeScript, Python LiveKit, MongoDB*

- Built a real-time voice tutoring system using LiveKit WebRTC and FastAPI, achieving <1s audio latency.
- Implemented an AI pipeline (STT→LLM→TTS) with Socratic prompting to adapt guidance without answer dumping.
- Integrated Google Classroom APIs with OAuth and MongoDB token storage to securely fetch courses and assignments.

WriteLight (FreeCodeCamp Hackathon Project) | *React, JavaScript, Tailwind, DaisyUI, MongoDB*

- Created a vocabulary learning platform by collaborating on a team of 10 using Figma, with responsibilities of developing core frontend features, including Word of the Day, navbar, and marketplace.
- Standardized patterns for forms, navigation, and data flow, cutting redundant logic by 30% and improving codebase maintainability for future feature development.
- Connected frontend to backend APIs and MongoDB database for journaling and vocabulary data retrieval.

LEADERSHIP

Management Leadership for Tomorrow (MLT)

Jan 2026 – Present

Career Prep Fellow

- Selected for a competitive 18-month leadership development fellowship focused on accelerating the growth of emerging technical and business leaders.
